

MOSES LAKE'S MOST WANTED:

CLEAN WATER ENEMY NO. 2:

"MR GREENTHUMB"

Wanted for:

Nutrient Pollution

The things that keep our yards and gardens green and happy can also harm our lake and wetlands. These substances feed the algae and weeds as well, leading to explosive overgrowth of aquatic plant life.

Nutrient pollution is the single largest pollution problem affecting recreational lakes in the United States.

When it rains, yard waste and chemicals can wash directly into storm drains and gutters and eventually into our waterways –
UNTREATED!

**SWEEP IT UP! KEEP IT UP!
STOP OVERSPREAD - USE
ONLY WHAT YOU NEED**

GUILTY
