

# MOSES LAKE'S MOST WANTED:

## CLEAN WATER ENEMY NO. 7:

### SAM THE SHADE TREE MECHANIC

Wanted for:

Oil and chemical pollution

It's an American ritual – the changing of the oil. But before you begin that project, think about what to do with those used materials.

It might be tempting to see that street grate or gutter as a convenient place for disposal. NEVER pour these fluids down a storm drain! Motor oil, antifreeze, gasoline and other mechanical fluids are toxic to our watershed.

Have your car maintained at a commercial service location. If you choose to do it at home, be sure to contain any fluids, clean up all spills, and take your used materials to a recycling location for disposal.

**ONLY RAIN DOWN  
THE DRAIN!**

Want more tips? Call the Stormwater Department!
