

# MOSES LAKE'S MOST WANTED:

CLEAN WATER ENEMY NO. 3:

**BOBBY "BABY BUBBLES"**

Wanted for:

Chemical and heavy metal pollution

When you wash your car in the driveway, it doesn't just stay in the driveway!

Soaps, detergents, oil, grease, heavy metals and road grime come off the car and are carried down the storm drain to the watershed.

These compounds injure fish and aquatic life and contribute to the nutrient pollution (and shorter lifespan) of a waterbody.

Take your car to a commercial car wash, or wash it on the lawn. Use a shut off nozzle to minimize flow.

**REMEMBER –  
WHAT GOES DOWN  
GOES OUT!**

Want more tips? Call the Stormwater Department!
